

RevoEdge

REVOEDGE HUB-AND-SPOKE

Store-and-Forward

The RevoEdge Enterprise offers local data buffering functionality at the edge of the network, with a limit of up to 500 tags. If a network connection between RevoEdge and the RevoEdge Ignition server (with EAM installed) is severed, RevoEdge Enterprise will continue to collect historical data for up to one week. When the connection is restored, RevoEdge Enterprise will synchronize data back to the RevoEdge server to maintain data integrity
